Winchester Gardens Presents Products for a New Season

Following last year's release of Bio Pots and building upon their plant food manufacturing tradition, Winchester Gardens announces the release of a new line of wrought iron lawn furniture and décor. John Jordan, a member of the Winchester Gardens team, says, "Our goal is to provide quality products for every type of outdoor living space. This means using green materials as much as possible and always calling upon our manufacturing experience to produce an excellent product at the lowest possible price."

Jordan says that the company tries to live up to their slogan, "Love to Grow." It makes sense, then, that the company got its start selling plant foods. They offer a wide array of tree and shrub spikes as well as tomato, rose and elephant ear fertilizers. Each fertilizer is specially designed to help the plants within your landscape flourish all season long.

Winchester Gardens' line of biodegradable pots, constructed of bamboo, rice husks, and straw, show their "Love to Grow" in an earth-friendly way. Bio Pots offer green thumbs an alternative to plastic pots that amount to 300 million pounds of garden industry waste each year. There are Bio Pots for indoor use—these decorative pots are available in an array of colors including burgundy and Mediterranean blue—and Bio Pots Plus, which are designed for outdoor and nursery applications. By providing an organic fertilizer as the pot breaks down, Bio Pots Plus aid in maintaining healthy plants, while also minimizing transplant shock.

"We think now more than ever that outdoor living space can become a place for people to relax and spend quality time," Jordan proposes. "Creating a space with fresh tomatoes, sharp-looking patio furniture and friends and family grilling out just makes sense. And using green products means less hassle, now and later."

Look for Winchester Gardens products in your local garden centers and hardware stores, and visit their website at wgardens.com for more information.
