Elephant Ear Plants Can Get a Boost from Winchester Gardens

With a motto like “Love to Grow,” it makes sense why Winchester Gardens is expanding their line of plant foods to include an elephant ear fertilizer. This trendy landscape foliage is popular for its size and large green leaves. Designed to help the plant flourish all season long, this fertilizer is the perfect choice for a variety of landscape scenarios.

John Jordan, a Winchester Gardens representative, doesn’t suggest eating the plant however. Indigenous to tropical regions, elephant ear is used to make the traditional Hawaiian dish poi. “Plant the elephant ear to add a splash of the tropics to the upper 48,” says Jordan. “If you want something to eat, use our fertilizer and grow tomatoes. I’d go to Hawaii to get poi.”

Winchester Gardens currently manufactures a variety of plant foods. “We produce spikes under various plant types including tree and shrub, evergreen, fruit and citrus, and rose,” says Jordan. “These products are designed to be quick and easy—no mess.” The company has manufacturing roots that go back over thirty years. When asked why Winchester Gardens’ fertilizers are the best choice for consumers, Jordan replies confidently, “We make the best spikes... the best plant foods. Our experience in the industry makes us capable of manufacturing a cost-effective product. Our elephant ear fertilizer is meant to be a new gardening tool for the American landscape.”

Look for Winchester Garden’s plant foods at your local garden center or hardware store, and visit their website at wgardens.com for more information.
